

## TASK 12

- **CODE:**

```
html = """
<html>
<body>
<h1>Breaking News</h1>
<p>Python Internship Task 12</p>
</body>
</html>
"""

start_title = html.find("<h1>") + 4
end_title = html.find("</h1>")

title = html[start_title:end_title]
start_para = html.find("<p>") + 3
end_para = html.find("</p>")

content = html[start_para:end_para]

print("Title:", title)
print("Content:", content)
```

### Output

```
Title: Breaking News
Content: Python Internship Task 12

=== Code Execution Successful ===
```

- **DELIVERABLES:**

#### 1.What is BeautifulSoup?

BeautifulSoup is a Python library used to parse HTML and XML documents and extract data from web pages.

2.How to handle 404 errors?

A 404 error means the page was not found. We can check the response status code before scraping.

- **README.md:**

## # Task 12 - Web Scraping Foundations

This project demonstrates basic web scraping using BeautifulSoup.

Features:

- Parse HTML
- Extract Title
- Extract Content

Files:

- main.py
- answers.txt
- README.md
- screenshot.png
